

Dscaff Engineering Sdn Bhd

Is a Malaysian based company who specialize in scaffolding supply and scaffolding contracting services. We have developed our own patented modular ring scaffold system using high strength lightweight components with super high capacity. We compliment this with EN standard tubular scaffolding components and our own allow truss systems, to deliver a project successfully.

Dscaff has been awarded ISO 9001, ISO 14001, ISO45001 , and ISO 29001 (specific to O&G). Safety and training are our focus, combined with our advanced TAG IT in house software which gives our client live updates on all scaffolding structures on their projects.

Our Services

Hire and sale of new and used;

- Tubular
- Modular
- Alloy scaffolding systems

Scaffolding contracting services;

- Management
- Skilled Labour
- Material

Insulation Contracting Services :

- Skilled Labour
- Supply of Material

3D industrial scanning services

Skilled manpower supply

TAG-IT

Tag-IT is a digital transformation of scaffold management system which unifies information technology (IT) and management processes to provide a seamless transition from manual processes to digitized solution

TAG-IT BY DSCAFF

Scaffold Tagging

Record and monitor scaffold tags, from the erection to disassembly of a scaffold structure. A step by step process to record all details of a scaffold structure.

Tag Inspection

Schedule, monitor and perform scaffold inspections with an Android or Apple smartphone. View scaffolding tags status in real-time. i.e. green tag, yellow tag and red tag. *Explosion protection for device may be required*

Work Completion Report

Work completion report such as the Scaffold Handover Certificate, Scaffold Modification Certificate and Scaffold Dismantle Certificate can be generated electronically and printed and submitted to Client.

External Data Linking

Attach external documents, images and forms as reference materials. i.e. scaffold inspection checklist, work orders from clients, and scaffold images

Geo-location of Tags

Real-world geographic location of scaffold tags. Locate the scaffold tags in the project site within 25m radius proximity.

Invoicing Data

Generate claims such as the erection report, modification report, dismantle report and rental report for invoicing purpose. i.e. cubic meter data, scaffold up-time data and man-hours
